

Issue 1-5

User	Module	Function	Feature	Assessment Type
Individual >	Assessment >	Take Assessment >	Static Display>	Normal Assessment

1. Static display order is not working. It should go by the assigned order, but it is not going that way (jumbled up)
2. For Static Display, the order should be exactly in the order each section, subsection and questions are assigned.
3. Section/subsection names should appear on the TEST PROGRESS sidebar
4. Assigned questions of a section/subsection take a reverse order, compared to the order in which they are assigned.
5. Only 17 questions assigned, but below it shows 21 questions, 35 total answers

The screenshot displays the 'Standard Assessment Testing 1' interface. At the top, a header bar shows 'Question 1 of 21 - Answered: 0 / 35 - Bookmarked: 0 - Skipped: 0'. Below this, a sidebar on the left is titled 'TEST PROGRESS' and lists seven sections. Section 1 is highlighted with a blue square. The main area on the right contains a video player with a large blue play button and the text 'Click to play the video'. Above the video player, there is a note: 'You will view a short video in this question. Based on the conversations in the video, there will be questions which you have answer by choosing correct answers. Note: The video can be played only once. Therefore, pay close attention.' Below the video player, a message states: 'Answer options will be available after the presentation ends.' At the bottom of the sidebar, there is a 'Previous' button. At the bottom of the main area, it says 'Question 1 of 21 - Sub-question 1 / 3'.

Issue 6-8

User	Module	Function	Feature	Assessment Type
Individual >	Assessment >	Take Assessment >	Random Display>	Normal Assessment

6. Since the display order setting is done in two different tabs (Overview and Sections), how to proceed with different display order configuration is not clear. Make it less confusing by modifying layout and adding necessary instructions.
7. Only randomization at the assessment level seems to come out alright, but L1 level, L2 level, etc. do not come out as specified in the requirement document. (Refer to Review Doc 5, page 3)

- For Random Display, display order set at a subsection level should show its child subsections and question randomized; parent level sections should not have randomization.

Issue 9-10

User	Module	Function	Feature	Assessment Type
Individual >	Assessment >	Resume Assessment>	Qn Display >	Normal Assessment

- When resuming an assessment after an interruption, all questions (both attempted and unattempted) appear. Only unattempted questions should appear on resuming the assessment.
- Attempted questions with multiple sub-questions appear twice, one as attempted and another as unattempted. See below, total number of questions increases from 17 to 21.

Question 2 of 21 - Sub-question 1 / 3

Skip Next

You will view a short video in this question. Based on the conversations in the video, there will be questions which you have answer by choosing correct answers.
Note: The video can be played only once. Therefore, pay close attention.

Video was already played. Replay is not permitted for this question.

Based on the video which statements correctly represent the theme of the interview?

☐ The two men represent a marketing company in the energy sector.

☒ There is aggressive competition in the market.

☒ Angion is doing well in energy business.

☐ Energy demand is declining currently.

Issue 11-15

User	Module	Function	Feature	Assessment Type
CJ Admin/Psychometrician >	Assessment >	Create Assessment>	Timer Setting>	Normal Assessment

- If timer is set at a certain level, the same is disabled at other levels. That is, if timer is set at assessment (0 level), then timer cannot be set at all child levels; if timer is set at L1 level (a particular section), then timer setting for all its child levels is disabled. Currently, you can set timer at all levels without restriction. See below for example, timer is set L2 Level (1 and 2) at 4 min and 5 min, while L1 level (3) is set at 7 min (it should be 5+4 = 9). This creates confusion.
- Section listing should change from last-to-first (descending) to first-to-last order (ascending). The first-to-last order is easier to work with and less error-prone.
- Timer setting at the question level is not available. Feature is required.

Sections (Variable Structure)

+ Add Section

L1 Section 3 - 7 min

+ Sub-section Edit Delete

L2 Subsection 1 - 4 min

There are two tables shown in the image below. One is *Substitution Key* table, and the other is *Answer Table*. You have put the correct alphabet to *Answer table* blank row according to the pattern shown in the *Substitution Key* table.

Choose the correct answer from the options given below the question.

Substitution KEY

1	2	3	4	5	6	7	8	9
A	B	C	D	E	F	G	H	I

Answer KEY

1	2	3	4	5	6	7	8	9

In which order will the alphabets in the Key Table fill the blank row in the Answer Table.

☐ 3 F I

☐ 2 G I

☐ G F

☐ 2 G I

Select the correct answers from Group B by matching the items on Group A.

Click on item from Group A, then click the matching item from Group B. (Some Group B items are dummy → they don't match any Group A item.)

GROUP A

Electrical Substation

Electrical Load → Voltage regulation

Electricity Generation → End users

Electricity Transmission → Power Production

Electricity Distribution → High voltage transfer

Smart grid → Local Delivery

GROUP B (SHUFFLED)

Computerized power production

Propulsion system

Voltage regulation

End users

Power Production

High voltage transfer

Local Delivery

Digital monitoring

Electrical line management

Issue 18

User	Module	Function	Feature	Assessment Type
Individual >	Assessment >	Resume Assessment>	Submit Assessment >	Normal Assessment

18. When resuming an assessment after an interruption, assessment submission shows that 12 questions are not answered, although all questions were answered. Actual no. of Qns is 17 only.

Issue 19

User	Module	Function	Feature	Assessment Type
Individual >	Assessment >	Resume Assessment>	Total Answer >	Normal Assessment

19. Same set of questions (17), but the number of answers is different from each attempt. Once it shows 23, in another 35 and now 38 (see below).

Issue 20

User	Module	Function	Feature	Assessment Type
Individual >	Assessment >	Take Assessment>	Previous >	Normal Assessment

20. During randomized display, clicking the previous button does not fetch the immediately previous question answered. Instead, it randomly picks a question from the previously answered list. Previous click should fetch the immediately previous question answered.

Issue 21

User	Module	Function	Feature	Assessment Type
Individual >	Assessment >	Take Assessment>	Timer >	Normal Assessment

21. During section-level timed display, expiry of allotted time does not automatically stop the question display at both section/subsection levels. Section-level question display should stop and move on to the next section/subsection; at the same time the timer is reset for the next section/subsection.

Issue 22-23

User	Module	Function	Feature	Assessment Type
Individual >	Assessment >	Take Assessment>	Results >	Normal Assessment

22. The scoring is incorrect for **1f: MCQ - Image Flash with Multiple Questions** Qn type. As shown below, there are three answers to a multiple answer question; the combined score for three answers should be 3. However, the results shows combined score as 1 and received score as 1.
23. Qn type name should be modified from **1f: MCQ - Image Flash with Multiple Questions** to **1f: MCQ - Image Flash with Multiple Answers**.

Answer options will be available after the presentation ends.

Issue 43

User	Module	Function	Feature	Assessment Type
Individual >	Assessment >	Take Assessment >	Test Summary	Normal Assessment

43. When the assessment display takes a random order, the side bar shows the movement from one question to another in the same random order. However, the section and question listing on the side bar should be in the static order (as assigned).
44. Idle time during assessment taking results in automatic log out. It should not happen. While the assessment is going on, automatic log out should be disabled. If this is not possible, before the log out, there should be a warning message should popup telling that the system will log out due to long idle time.
