

System Administration Process

1. Introduction

System administration process is the central loop that controls all different processes and maintains the system in a functional condition. Normally it is the Admin user who is responsible for such overall control, while corporate admin users are partly responsible for certain administrative activities under the specific corporate setup.

The **Admin User** is responsible for the following activities.

1. User Role Management
2. Task Management
3. System Management

2. User Role Management

Different users of the System have different roles, rights and responsibilities; and it is the Admin User who defines these roles.

2.1 Define Roles

The Admin User defines different roles and assigns each role's rights. Each role thus defined is attached to a base role which is predefined. Thus, *Psychometrician* is a base role, and the user can create more roles within this category by assigning different rights to different roles.

- User clicks on "Define Role" button
- System shows the list of base roles under which new roles can be defined
- User selects a base role
- System shows entry fields to enter new role's name and description
- User enters relevant inputs and saves
- System creates a new role under the base role
- User clicks on "Assign Rights" button
- System shows a checklist of various rights provided for the base role
- User checks relevant rights and submits
- System assigns selected rights to the new role

2.2 Add User (by Admin User)

- User clicks on "Add User" button
- System shows the list of roles
- User selects a user role
- System shows fields to enter user details, which include:

For **Psychometrician, SME, Reviewer, Trainer, Counsellor**: Name, e-mail id

For **Corporate Admin, Corporate Exclusive**: Name of organization, Name of Manager (primary contact), Official Contact number, Email ID of Primary Contact, PAN/TAN of organization, Corporate Address

For **Channel Partner**: Name of Agency, Name of Primary Contact, Email ID of primary contact, Contact No. of Agency, Permanent Address, Allocated Region

- User enters required inputs in the entry fields and submits
- System shows the user profile with default rights as active
- User may restrict the rights of the user by inactivating them and submits

- System saves the user information along with rights assigned to the user
- System sends an email to the new user with link to the system for signup

2.3 Add User (by Corporate Admin, Corporate Exclusive Admin, Group Admin)

- User clicks on “Add User” button
- System shows the list of roles
- User selects a user role
- System shows fields to enter User details, which include:

For **Group Admin**: *Name, official E-mail id, Employee ID, Region/Division*

- User enters required inputs in the entry fields and submits
- System shows the user profile with default rights as active
- User may restrict the rights of the user by inactivating them and submits
- System saves the user information along with rights assigned to the user
- System sends an email to the new user with link to the system for signup

For **Corporate Individual User**: *Name, official Email ID, Employee ID*

- System also shows a **bulk upload** option
- User enters required inputs in the entry fields or uploads user details and submits
- System sends an email to the new user with link to the system for signup

2.4 User Management (by Admin User, Corporate Admin)

Admin user (and corporate admins in case of corporate users) can make a user account inactive or delete, or edit user details.

- User clicks on “Manage User” button
- System shows list of all types of users
- User selects the user case to be modified
- System shows the user details
- User makes necessary update

3. Task Management (Admin User)

Admin User is the only one who assigns tasks to various users in the system and monitors their completion.

3.1 Assign Task

The Admin User assigns different tasks to different users based on requirements.

- User clicks on “Assign Task” button
- System shows the list of users for assigning tasks
- User selects the user and submits
- System generates a task with unique Task ID against that user along with entry field to enter description of the task/ message
- User enters the relevant description/ message and submits

3.1.1 SME Task Assignment

- System shows QB categories and subcategories along with a *question-type* drop list
- User selects categories and subcategories and select a question type against each category to which questions should be added (**NOTE**: It may be done as a *drag-and-drop* function also)
- System generates a table with prefilled categories/subcategories and question types and asks the user to specify task details:

Number of questions, number of options, number of correct options, Difficulty Level, Cognitive level, and Due Date

- User enters required details and submits (**NOTE:** Difficulty level and cognitive level are optional fields)
- System generates a new task and sends it to the concerned SME along with a new task notification (Task description/message is included in the notification)
- System sends a notification to Helpdesk too, so it can initiate a direct call with the SME or email

3.1.2 Reviewer Task Assignment

- System shows the list of new SME tasks (not assigned to any reviewer)
- User selects the relevant SME task and submits
- System generates a new reviewer task and sends it to the concerned reviewer along with a new task notification (Task description/message is included in the notification)
- System sends a notification to Helpdesk too, so it can initiate a direct call with Reviewer or email

3.1.3 Psychometrician Task Assignment

- System shows the list of new SME/Reviewer tasks (not assigned to any psychometrician)
- User selects the relevant SME/Reviewer tasks and submits
- System generates a new psychometrician task and sends it to the concerned psychometrician along with a new task notification (Task description/message is included in the notification)
- System sends a notification to Helpdesk too, so it can initiate a direct call with the psychometrician or email

3.1.4 Trainer/Counsellor Task Assignment

- System generates a new trainer/counsellor task and sends it to the concerned trainer/ counsellor along with a new task notification (Task description/message is included in the notification)
- System sends a notification to Helpdesk too, so it can initiate a direct call with the trainer/ counsellor or email

3.2 Manage Task

The Admin User is responsible for tracking the progress of task completion. Therefore, following activities are part of this role.

3.2.1 Monitor Task Progress

- User clicks on “Manage Task” button
- System shows list of all pending/active tasks assigned to various users
- User selects a particular task for viewing the progress
- System shows the details of the task along with the task progress update (The concerned user whose task is viewed should have updated the task progress on a weekly/daily basis)
- User may initiate a notification requesting for update or conveying any additional information

If there is a request from the concerned user to **extend the due date**, then

- System the *extend due date notification* from the concerned user
- User modifies the due date field and submits
- System updates the modified due date

3.2.2 Cancel Task

- User clicks on “Cancel Task” button
- System asks the user to confirm ‘cancel’ request
- User confirms the request

- System asks the user to specify reasons for cancelling the task
- User specifies the reasons and submits
- System cancels the task and sends a notification to the concerned user (**NOTE:** The user can no more access the cancelled task.)

3.2.3 Approve Task Completion

- User selects an active task
- System shows details of the task details including task progress

If the **task is complete**, then

- User clicks on “Approve Task Completion” button
- System asks the user to confirm ‘approval’ request
- User confirms the request
- System shows entry field to give comments
- User enters comments and submits
- System updates and shows the task as complete

4. System Management

The Admin User has an overall supervisory role. As part of it, he should be informed of all concerns and issues encountered by various users of the system and initiate necessary action. The communication process through the system is mostly one-way, i.e., from a system user to the Admin. The latter initiates responses or actions through extra-system means, like email, telephone etc.

- System routes requests, feedbacks, issues, etc. from different users to the Admin User and the Helpdesk
- User opens such notifications and responds directly through email or telephone

NOTE: Helpdesk also receives the above said notifications and responds directly through email or telephone on behalf of the Admin User, or intimates him about such notifications.
