

System Testing & Review Feedback Report 3

Training

Many of the features pointed out here as missing apply to all three types of courses. Therefore, the next part of report (Section 1-5) will discuss issues related to those features and functionalities and provide suggestions (recommendations) regarding the process of setting up.

1. Course Registration:

Issue 1. Individual user should register for a course by filling up a registration form. Currently, there is no such facility to show the registration form. Payment process can be initiated only after registration. The details to be entered in the form can be taken from individual user profile page.

Issue 2. The to-and-fro notification system is not available, or how it works is not clear. Post registration, the user information should be notified to Admin/help desk. Help desk takes initiate to communicate with the individual user.

Issue 3: Payment process cannot be viewed (perhaps, because the payment linking-up process has not been done).

Issue 4. Post registration, the individual user should be able to view the course structure. No such structure is currently available. The headlines of the course structure, duration, type of course, conditions for completion etc. should be shown in the course structure.

Ref: Module-wise support document _ Training Set Up Process, page 5, section 6

6. Training Registration Process

The end-user (student) initiates a process for registering themselves to a training is described in this section. The user can view all training programs available on the platform on their dashboard.

- End-User clicks on a training course
- System shows the general structure of the course and other details about the program
- User clicks on “Register” for registering to a course
- System displays a registration form to fill up
- User fills the form and submits
- System takes the user to the payment process
- User makes the necessary payment
- System shows the detailed structure of the course along with course contents which are active for the user to start the training program (Rule: If the training course is *scheduled*, then the course duration starts from this time)

Issue 5. Soon after payment confirmation, a notification has to go to the trainer and Admin. Currently, these users can view the number of individual users who have registered, but not their personal details and registration/payment details. Such information should be available to the trainer and admin users.

2. Course Conduction:

Issue 1. Course Commencement: In case of *Online standard* courses, course commencement is from the date the registration and payment process are completed. In case of *Online Live* and *Offline* courses, it starts from a date announced on the CJ website. (These courses are, in most cases, conducted in group sessions. A registration period and a commencement date would have been announced earlier on the Website/social media.)

Ref: Module-wise support document _ Training Set Up Process, page 5, section 6

- User takes the program as per his convenience
- System provides following feedbacks on the course progression when the user enters the course every time
Course Completion Status, Time Tracker (Time-spent, Time-left), Score report (so far obtained), Feedbacks and messages from the trainer/ admin, Option to resume from where he last left

Issue 2. Facilities to show course completion status, time tracker (time-spent, time left), score report, (so far obtained, feedbacks and messages from the trainer should be available on the Individual user's training dashboard.

Issue 3. Facility to resume the course from where it was stopped last time should be available.

3. Add Assignment/ Submit Assignment:

Issue 1. Add/Edit Assignment features are not available currently. The trainer should be able to enter the description of an assignment and the conditions for its submission in a Text field. Text formatting facilities should be provided. He should be able edit and update this field in future.

Issue 2. Embedding online links for additional content sources should be enabled. Such external sources include externally sourced videos, audios, document files, YouTube links, websites etc.

Ref: Module-wise support document _ Training Set Up Process, page 3, section 2.3.2

2.3.2 Add Assignments

The user can add additional training materials to the session through such sources as additional videos, audios, doc files, YouTube links, websites etc, and enable students to submit reports and receive feedback

NOTE: Assignments are not part of the main session, but additional study materials or external sources wherefrom students can access additional knowledge and submit their reports.

- User clicks on "Add Assignments" button
- System shows various options for attaching assignments to the session, such as embed video/ audio/ document links, website links, etc.
- User embeds/ links required sources to the session

Note: If Submission of Assignment Report is a requirement, then the candidate is not allowed to move to the next session/topic/lesson, unless the report submission process is complete.

Issue 3. Last date for Assignment submission should be provided, and when the deadline expires, individual user cannot initiate the submission without special permission from the trainer.

Issue 4. Feature to select Report Submission mandatory or non-mandatory should be enabled.

Issue 5. Report Submission feature is not available. This feature should be enabled.

Issue 6. Individual user should be able to submit report by uploading relevant PDF/PPT/Word files. Currently, only copy-pasting or typing text into the entry field is the way to submit report. In this case, the candidate can only type text. Making a formal report with images/diagrams/flowcharts etc. is not possible.

Ref: Module-wise support document _ Training Set Up Process, page 3, section 2.3.2

If the user wants the student to **submit reports** on an assignment, then

- System shows option for submitting assignment reports: *Enable Report Submission*
- User clicks on “Enable Report” button
- System **shows entry fields to add description and instruction for the report**
- User adds description and instructions for submitting assignment report
- System saves input details and enables report submission function

(Rule: When the end-user (student) submits the report, a notification is sent to the user (trainer), and the user is able to open and view the report, give a score/rating, and enter relevant feedback.)

Ref. Individual User >> Training >> Assignments >> Submit Report

The screenshot shows a web interface for submitting a report. At the top, there's a header 'Assignments'. Below it, there's a section with placeholder text 'hgdfgh', 'ffghdfg dfgh dfgh dfgh fg', and a link 'Open resource >'. To the right of this section is a button labeled 'Submit report'. Below this is a large text entry field labeled 'Your report *' with a placeholder 'aljdfikjdklk'. At the bottom of the form are two buttons: 'Submit' and 'Cancel'.

Issue 7. Text formatting facility should be added to the text entry field, so that the candidate can create a formal text-based report, with heads, subheads, highlights with colours, italics, boldface etc.

Issue 8. After the Individual User submits Assignment report, the trainer is supposed to evaluate the report.

1. Trainer should be able to give score/rating the report on a 10-point rating scale.
2. He should be able to enter feedback (Text field)

4. Assessment Creation, Linking & Reporting

Issue 1. Currently, Add Assessment feature allows to select assessments from the CJ assessment pool. However, as per the requirement document, the trainer user can create an assessment using CJ's assessment tools. The user has access to the CJ Question Bank. He can select and assign appropriate

questions to create an assessment for a specific purpose. (The trainer should not have access to the entire pool of assessments in main CJ assessment system.)

Ref: Module-wise support document _ Training Set Up Process, page 4, section 2.4.1

2.4.1 Add Assessments/Tests (During Session)

Within the main session, there may be multiple short videos or audios, sequentially arranged and spaced/interlinked by assessments/tests. The user can add assessments in between videos, audios and/or documents.

- User clicks on "Add Assessment" button
 - System shows entry fields to specify assessment title, objective, and description/instruction
 - User enter relevant inputs and submits
 - System shows filters to select questions from the question bank
 - User applies filters, selects questions as required and assigns questions to the assessment
 - System shows the assessment design features (as explained in the Assessment Design document)
 - User configures the assessment as per requirement
- If the user wants to add a report to the assessment, then he has to define a report, which he does according to the 'general report' process.

Issue 2. When the trainer opens his Assessment page, only those assessments created by him should be available. *Note: He should not get access to the entire pool of assessments in the CJ system.*

Issue 3. There is no feature to link Assessment to a particular session/topic/lesson. In the course structure, there are multiples sessions, topics and lessons. So, the assessment should be linked to a particular session/topic/lesson. End of course is ok, because the reference course is only one to which the assessment can be linked to. The screenshot below shows the possible ways of assessment linking, but actual linking to a specific session/topic/lesson has not been enabled.

Ref: Module-wise support document _ Training Set Up Process, page 4, section 2.4.1.1

2.4.1.1 Interlinking contents and assessments

- User clicks on "Interlink" button
- System shows the session contents and assessments and facility to sequentially interlink them
- User interlinks the session contents and assessments.
- System saves the interlink inputs

Ref: Admin User >> Create Course >> Online Standard >> Assessments

Link Assessment to Course

Select a published assessment from the Assessment module. It will be embedded at the specified level (during session, end of session/topic/lesson/course).

Title (shown to students) *

e.g., Lesson 1 Quiz

Assessment *

Select an assessment...

Level

End of Session

☒ Scored assessment (affects course completion)

Link assessment Cancel

During Session

End of Session

End of Topic

End of Lesson

End of Course

Issue 4. Report of the assessment should be made viewable to the individual user and the trainer.

5. Course Content Sequencing

Issue 1. There should be facility to sequence the course contents. A sequenced course allows the individual user to complete contents in the sequential order they are structured. He cannot skip one and go the next and must go by the sequential order. If the sequential order is not enabled, he can skip contents and go to any session, topic, lesson at will.

Ref: Module-wise support document _ Training Set Up Process, page 4, section 2.4.1.2

2.4.1.2 Automatic sequence of session content

- User clicks on “Automatic Sequence” button
- System asks the user to **enable the automatic/manual sequence of session contents**
- User enable the appropriate option
- System saves the sequencing inputs

5. Setting Course Completion Parameters

Issue 1: *Setting parameters* for course completion is not available. The feature should allow setting parameters. The user (trainer) clicks on ‘Set Parameters’ for course completion, and the system shows the structure of the course. The user checks contents (mandatory) which the individual user should complete for the successful completion of the course.

Ref: Module-wise support document _ Training Set Up Process, page 4, section 2.6

2.6 Setting Parameters for Course Completion

The user can **set conditions for completion of a session, lesson and course.**

- User clicks on “Parameters for Course Completion” button
- System shows all course contents (including assignments and assessments) and their schedule
- User **checks the contents in each session, lesson, course to be *mandatory* for completion**

6. Course Management

Issue 1: Trainer should be able to modify a published course after securing permission of the Admin.

Request for Course Updation feature should be added on the trainer’s *Training Page*.

A notification of the request is sent to the Admin

Approve Course Updation feature should be added on Admin Training Management page

A notification of approval is sent to the Trainer

Issue 2: Trainer can delete a published course with the permission of the Admin.

Request for Course Deletion feature should be added on the trainer’s *Training Page*.

A notification of the request is sent to the Admin

Approve Course Deletion feature should be added on Admin Training Management page

A notification of approval is sent to the Trainer

5. Training Management Process

The trainer-user can modify the contents of the course with the permission of the Admin user. Such activities include adding new assignments, replacing main session contents with new ones. However, course structure cannot be modified by the trainer-user, but only by the Admin user. Deleting a course is also the right of the Admin user only.

As part of the daily management of the courses, which the trainer-user is responsible for, the user has to login and check for messages from end-users and respond to them view assignment reports submitted by the end-users and give them feedback and scores.

Trainer-user also should check the schedule of the *live-online session* if offered in the course, and fix date and time for the same and notify the end-users

- User clicks on “Scheduler” button
- System shows the scheduler
- User sets the ZOOM meeting and clicks on the “Notify” button
- System saves the schedule details

NOTE: When the student-user opens the course page, there will be a pop-up notification about the upcoming event (Live Session) along with the meeting link. When the user clicks the “Consent” button, a notification goes back to the trainer-user about the participation of the end-user in the live session.

Issue 3: There should be facility to show the trainer upcoming live-online sessions on his training page. *Upcoming Live Sessions* show him under a course along with the scheduled dates and times.

Issue 4: Trainer should be able to reschedule a scheduled session. The system asks to give the reason (Text field)

Issue 5: If the upcoming session is not scheduled, and a session schedule request is placed by the individual user (notification), then the trainer should be able to schedule the upcoming session.

Issue 6: Post scheduling, a notification goes to the individual user.

Course-Specific Issues:

1. Online Standard Course

Issue 1. Add Content (Text, audio, video, online link) and content configuration are not available. Only Session title can be added. There should be features to upload a combination of text/audio/video contents under a session in a sequence, also, features to directly type text into the entry field or upload files such as PDF, Word, PPT files.

Ref: Module-wise support document _ Training Set Up Process, page 2, section 2.3

2.3. Adding Session Contents

2.3.1 Add Main Session

The main session is a video, flash video, audio, or text material. The user selects the appropriate content for adding in the main session.

- User clicks on "Add Content" button
- System asks to select: video (flash), audio, text format
- User selects appropriate content format

If the user selects **Video** format, then

- System shows "Video Upload" button (and/or drag and Drop function)
- User uploads (or drag and drop) as many video files as required

If the user wants to add **interactive questions** during the video, then

- User clicks on "Timeliner" button
- System displays the video player with timeliner function (to set timeline for adding interactive question)
- User sets the timeline for the question
- System shows entry fields to enter question text and options and to mark correct option
- User enter the question text and options and marks correct option and enter
- System shows two conditions: *If the answer is correct, If the answer is incorrect* and asks the user to set the timeline in either condition
- User sets timelines for both conditions (Rule: When the test taker selects an answer, the system moves on to the respective video material tagged to the correct/incorrect condition, and then continues to play the video)
- System saves the interactive question inputs

If the user selects **Audio** format, then

- System shows "Audio Upload" button (and/or drag and Drop function)
- User uploads (or drag and drop) as many audio files as required

If the user wants to add **interactive questions** during the audio, then the above process takes place with audio player

If the user selects **Text** format, then

- System shows "Text Upload" button (and/or drag and Drop function)
- User uploads (or drag and drop) as many text files as required

If the user wants to embed a video/audio within the text, then

- User clicks on "Embed a video/audio" button
- System shows the field to embed the video/audio
- User enter source details of the video/audio and submits
- System saves the details

Issue 2. Interactive questions during a video/ audio presentation need to be added while setting up the session content. If the test taker's answer to the question is incorrect, the video/audio replays from the previous timeline. An illustrative diagram is shown below:

As shown in the illustration, the video is divided into 4 timelines. End of the first timeline (10 seconds into the video), question 1 is presented, and if the trainee gets the correct answer, the video continues to the next timeline, if not the timeline 1 repeats. Depending on the length of the video/audio, the trainer appropriately defines the timelines. (If the trainer can define timelines using appropriate tool within the system, that will be the best option. If that is not possible, he has to use any external app to define the timelines.)

Alternatively, if it is possible to sequence contents as a series of short files (a mix of different media short files) and present questions at the end of each file, such approach also serves the purpose.

Issue 3. There should be facility to embed video/audio links within text contents.

Issue 4. Live Session date cannot be scheduled while creating the structure of the training course, since it cannot be predicted when a candidate will join the course. It can be done only after a candidate register for the course.

Ref. Admin User >> Create Course >> Online Standard >> Live Sessions

Add Live Session

Session title (e.g., Week 1 Q&A)

Mode: Online (Zoom) Scheduled at *: dd-mm-yyyy --:-- --

Zoom meeting URL (https://zoom.us/j/...)

Recommendation: In the Course Structure, Live Sessions can be scheduled at different levels (after a session, after a topic, after a lesson, etc. The Live Session should have specific name (enable text field for session name). When the candidate reaches the session before the assigned live session, the candidate is asked to send a request to the trainer to schedule the live session with any preference for dates if any. The trainer schedules the session, and notification goes to the individual user.

2. Online Live Course

Issues explained as above are applicable in *Online Live Course* configuration too. Each main session is a live session. However, additional contents, assignments, and assessments are attached as specified above.

Ref: Module-wise support document _ Training Set Up Process, page 4, section 3

3. Training Setup Process (Online-Live)

Online-live courses are ZOOM-class rooms. The trainer-user creates a course, defines its structure as well as assignments and assessments (except the main session) as described above, and delivers the Zoom sessions. **Zoom-setup facilities** are available on the system, and the user can schedule online sessions in advance or on an ongoing basis. System provides **facilities for notifications** to the end-users. In addition to these, the system shows the end-user a registration form for admitting oneself in the program, this registration details are available/viewable on the dashboard of the respective trainer-user.

Additional Issue 1: Feature to schedule online live session in advance (as currently available) or on an ongoing basis.

1. Advance scheduling enables setting dates for live session on particular dates. This facility is needed when group sessions are being conducted. After the expiry of course duration, the schedule can be reset.
2. Scheduling on an ongoing basis allows the trainer schedule the date and time for the next session based on the completion of the session that precedes.

Ref: Module-wise support document _ Training Set Up Process, page 4, section 3

3. Training Setup Process (Online-Live)

Online-live courses are ZOOM-class rooms. The trainer-user creates a course, defines its structure as well as assignments and assessments (except the main session) as described above, and delivers the Zoom sessions. **Zoom-setup facilities** are available on the system, and the user can schedule online sessions in advance or on an ongoing basis. System provides **facilities for notifications** to the end-users. In addition to these, the system shows the end-user a registration form for admitting oneself in the program, this registration details are available/viewable on the dashboard of the respective trainer-user.

Additional Issue 2: In emergency situations (like unexpected holidays, emergencies etc.), the trainer should be able to reschedule a session to a later date. In case an advance schedule needs to be rescheduled, the rest of the course schedule will be pushed forward from the rescheduled date.

Additional Issue 3: Facility for to-and-fro notification to the candidates and trainer should be available. Automatic system notification about upcoming sessions, rescheduling of sessions, etc. A candidate can send a message to the trainer about not being able to attend a session.

3. Training Setup Process (Online-Live)

Online-live courses are ZOOM-class rooms. The trainer-user creates a course, defines its structure as well as assignments and assessments (except the main session) as described above, and delivers the Zoom sessions. **Zoom-setup facilities** are available on the system, and the user can schedule online sessions in advance or on an ongoing basis. System provides **facilities for notifications** to the end-users. In addition to these, the system shows the end-user a registration form for admitting oneself in the program, this registration details are available/viewable on the dashboard of the respective trainer-user.

Ref: Module-wise support document _ Training Set Up Process, page 5, section 5

5. Training Management Process

The trainer-user can modify the contents of the course with the permission of the Admin user. Such activities include adding new assignments, replacing main session contents with new ones. However, course structure cannot be modified by the trainer-user, but only by the Admin user. Deleting a course is also the right of the Admin user only.

As part of the daily management of the courses, which the trainer-user is responsible for, the user has to login and check for messages from end-users and respond to them, view assignment reports submitted by the end-users and give them feedback and scores.

Trainer-user also should check the schedule of the *live-online session*, if offered in the course, and fix date and time for the same and notify the end-users

- User clicks on “Scheduler” button
- System shows the scheduler
- User sets the ZOOM meeting and clicks on the “Notify” button
- System saves the schedule details

NOTE: When the student-user opens the course page, there will be a pop-up notification about the upcoming event (Live Session) along with the meeting link. When the user clicks the “Consent” button, a notification goes back to the trainer-user about the participation of the end-user in the live session.

3. Offline Live Course

Issues described above in Online standard/Online Live courses are applicable here too. Offline Sessions are the main sessions in this course.

Ref: Module-wise support document _ Training Set Up Process, page 5, section 4

4. Training Setup Process (Offline-Live)

Offline-live courses are real-time class room sessions. The trainer-user creates a course defines its structure as well as assignments and assessments (except the main session) as described above and delivers live class-room sessions. The user can schedule classroom sessions in advance or on an ongoing basis. System provides **facilities for notifications** to the end-users. In addition to these, the system shows the end-user a registration form for admitting oneself in the program, this registration details are available/viewable on the dashboard of the respective trainer-user.

Counselling

1. Timeslots & Booking

Issue 1: After adding timeslots, counsellor user cannot edit any slot. It is required, because any error in entering the date/time and a need to cancel a timeslot because of any unforeseen event makes it necessary to revise the timeslot.

Issue 2: Adding timeslots is limited to next 3 weeks. This limit-defining feature is currently not available.

Issue 3: Always, at least one-week timeslots should be available on a counsellor's booking page. If this condition is not met, the counsellor should get a notification, asking him to update timeslots. Also, a notification goes to the Help Desk user so that she can message/ call the counsellor and remind.

Ref: Module-wise support document _ Counselling Process, page 2, section 3

3. Counsellor

Counsellor executes following functions on the system.

3.1 Updating Timeslot Availability

The counsellor should update the timeslots available for counselling at least on a weekly basis. He can update availability for 3 weeks maximum.)

- User clicks on “Update Timeslots” button
- System shows a calendar with time-setting facility for updating available timeslots
- User updates timeslot availability for one week at least, three weeks maximum
- System saves the timeslot availability details
- System sends a reminder notification every day to the user if the timeslot calendar falls short of one week minimum
- System sends a reminder to the Helpdesk too, so that the helpdesk executive can directly contact the user and ask him to update

Ref: Counsellor user >> Counselling >> My Dashboard >> Time Slot

The screenshot displays the 'Counselling' section of a user dashboard. At the top, there's a header with 'Counseling' and a user profile 'CO Counsellor'. Below this, a sub-header 'Counseling' is followed by the text 'Book a session with one of our professional counsellors'. A navigation bar includes 'Browse Counsellors (1)', 'My Dashboard' (which is active), and 'My Sessions (0)'. Underneath, there are tabs for 'Sessions' and 'Time Slots'. The main content area is titled 'Add Available Time Slot' and features a 'Start time' input field with a date-time picker showing 'dd-mm-yyyy --:-- --'. To the right of the input is a calendar icon and a blue button labeled 'Add 1-hour slot'. Below the input, a note states 'Each slot is 1 hour. Add at least 1 week of availability (SRS §3.1)'. At the bottom, a section titled 'Available Slots (2)' shows two slots: '31/7/2026, 11:52:00 am' and '3/8/2026, 9:30:00 am', both highlighted with orange boxes.

NAME	CATEGORIES	RATE	AVAILABLE SLOTS
Counsellor	—	\$50.00/hr	0 slots

[Book](#)

Issue 9: A Text Field should be added in appropriate page of the CJ Admin to enter '**Terms & Policies**' for counselling.

Recommendation: The CJ Admin is responsible for defining the terms and conditions. A text entry field for adding/editing terms and conditions should be enabled. Also, the same has to be viewable to the Individual user when he clicks on 'Accept Terms & Conditions'. It may need to be edited, so this feature is necessary.

Issue 10: After confirming a booking, the confirmed booking status with details of the candidate and counsellor should be notified to the respective Counsellor and the Help Desk.

Ref: Module-wise support document _ Counselling Process, page 1, section 2.1

If the user **selects an available slot**, then

- System sends a message to the respective counsellor and the **Helpdesk**
- System displays the message "Appointment will be confirmed by the counsellor within 6 hours; If the counsellor is not available, you can select a fresh timeslot or check with other counsellors for appointment. Or if you want to cancel the appointment, press "Cancel" your money will be refunded in 48 hours")

Ref. Counsellor User >> Counselling >> My Dashboard >> Sessions

[Sessions](#) [Time Slots](#)

No sessions yet. Students will appear here after booking.

Issue 11: Information on the cancellation and refund policy should be displayed to the individual user.

Recommendation: The CJ admin is responsible for defining cancellation policy. And it may be updated from time to time; therefore, an entry field should be provided to the Admin to add/edit cancellation/refund policy.

Issue 12: Post booking, it should be confirmed by the Counsellor concerned. A notification goes to the counsellor to confirm/cancel the booking. The counsellor should do this within 6 hours after booking.

Ref: Module-wise support document _ Counselling Process, page 3, section 3.2

3.2 Confirming/Cancelling Appointment

As pointed out above, after the counselee takes an appointment as per the user's availability calendar, the user should confirm the appointment, or else ask the counselee to take another timeslot or book with another counsellor.

- System shows appointment notifications when the user signs in
- User opens notifications and confirms/cancels the appointments
- System sends confirmation/cancellation notification to the counselee and the Helpdesk (Helpdesk executive directly contacts the counselee to inform about the confirmation/cancellation)
- System keeps a track of every incident of cancellation by the user

Issue 13: If the booking is confirmed, a notification goes to the individual user regarding the confirmation. If the booking is cancelled, then the notification informs about the cancellation and asks the user to book another timeslot from the same counsellor or from another counsellor.

Issue 14: System needs to keep a track of every booking cancellation by a counsellor. The track record should be accessible to the CJ Admin.

Issue 15: The individual user can cancel the appointment (booking confirmed by the counsellor). Cancellation and refund policies applied. Before 24 hours, full refund; before 4 hours 50% refund; less than 4 hours no refund). Refund, if any, will be initiated within 48 hours from the time of cancellation. The CJ Admin should be able to change conditions of refund policy from time to time.

Issue 16: If the individual user clicks *cancel*, he is shown a text entry field to indicate the reason for cancellation. A popup message appears which asks him whether he wants to consider booking another Counsellor/ Timeslot.

Issue 17: Counsellor users should be tagged to any of the counselling categories. See the screenshot below; it shows a dropdown, but counsellor is not linked to any category. So, the individual user does not know which category a counsellor is specialist in.

Ref: Individual user >> Counselling >> Book with Counsellor

Recommendation: The admin user, when he adds a counsellor user on the **Add User** page, can specify which counselling category the counsellor should be tagged to. This decision should be made by the CJ management (CJ Admin) because they interview the counsellor and decide which area he/she is specialized in. The feature includes add/edit facilities.

Issue 18: Counsellor user does not book counselling session. So, *My Sessions* page is irrelevant on the user's page. It should be removed.

Ref. Counsellor User >> Counselling >> My Sessions

Counselling Delivery

Issue 1: System shows a notification/countdown display on Individual user's dashboard as a reminder

Issue 2: When the session is over, individual user should fill a **feedback form**:

Ref: Module-wise support document _ Counselling Process, page 2, section 2.3

When the counselling **session is over**,

- System asks the user to **give feedback and opens a feedback form** (The form has different questions about user's experience and the effectiveness of the counselling and the counsellor.)
- User enters the feedback and submits
- System saves the feedback details **(Rule: User feedbacks are available only to the Admin User)**

Feedback Form contents:

1. Was the session useful? – Very useful, Useful, Somewhat useful, Not useful (Selection)

2. Write a few words to tell how it was useful or not useful (Text field)
3. Was the counsellor friendly and empathetic? Very much, Somewhat, Not much (Selection)
4. How did the session end? Ended on time, Ended before time, Ended late (Selection)
5. Would you choose the counsellor for a future session? Yes, May be, No (Selection)
6. Write a few words to tell why you would choose him/her or not (Text field)
7. Write a few words how we can improve the counselling service (Text field)
8. Rate the Counsellor on a 10-point scale – 10 means excellent, 1 means very poor (Rating scale)

Issue 3: The feedback should be available to the CJ Admin. *Note: Only the Admin has access to feedback about counsellors.*

Issue 4: When the session is over, the Counsellor should fill a **Session Summary form**

Ref: Module-wise support document _ Counselling Process, page 3, section 3.3

When the **session is over**,

- User ends the session by clicking on the “End Session” button
- System ends the session and asks the user to fill up the **Session Summary Form** (Session Summary form has specific fields for different types of information)
- User fills up the Summary form and submits
- System saves the summary form (Rule: Session Summary details are available to the user and Admin user ONLY)

Summary form Contents:

1. Enter client details and problem description (Text field, mandatory)
2. Enter Session Summary (Text field, mandatory)
3. Enter Provisional Diagnosis (Text field, optional)
4. Enter Case Prognosis (Text field, optional)
5. Did the session go smoothly – Yes, Somewhat, No (Selection)
Give reason (Text field, mandatory)
6. Is followup session needed? – Yes, No (Selection, mandatory)

Issue 5: If a followup session is consented by the client, the counsellor clicks on ‘Followup Session’ button and specify the date and time of the followup session (Text field).

Issue 6: Notification on followup session schedule is sent to Individual user and Help Desk

Ref: Module-wise support document _ Counselling Process, page 3, section 3.3

- System asks the user whether a **followup-counselling session** is consented/fixed
- User clicks YES or NO. If it is YES, then
- System asks the user to **specify the date and time**
- User specifies the date and time for the proposed followup-counselling session
- System sends a notification to the counselee and the Helpdesk

Issue 7: The individual user receives a notification asking to book the followup session on the specified date.

Ref: Module-wise support document _ Counselling Process, page 3, section 3.3

- System asks the user whether a **followup-counselling session** is consented/fixed
- User clicks YES or NO. If it is YES, then
- System asks the user to specify the date and time
- User specifies the date and time for the proposed followup-counselling session
- System sends a notification to the counselee and the Helpdesk

Issue 8: Individual user receives a popup message reminding him of the followup session and asking to make the payment.

Ref: Module-wise support document _ Counselling Process, page 3, section 3.3

When the counselee signs in to his dashboard,

- System shows a countdown clock with a message reminding him of the next proposed session, also asking him to initiate payment.
- User initiates payment and confirms the appointment
- System stores the confirmation details

Recommendation: It will be more effective if the individual user receives a message on his email also.
